

ABSTRACT

5 A concentrated physical distribution management system to be
used in the delivery of ordered cargo to a destination is configured as a
site capable of communicating mutually by using communication
network lines. The site is provided with a database server. The internal
processing section of the database server is composed of, at least, a
shipping instruction processing section for instructing the delivery of the
ordered cargo to the destination collectively including a physical
distribution trader, a physical distribution expense calculation processing
10 section for calculating physical distribution expenses necessary for the
delivery of the cargo to the destination, and a cargo tracking processing
section for indicating the delivery status of the cargo. The concentrated
physical distribution management system manages the cargo so that all
of shipping instruction concerning the cargo can be transmitted to the
15 physical distribution trader only by accessing a portal site.
